## Mail Inspector 4.0 Beta 1 released

Contributed by Marc  
02.01.2004

We are proud to announce the release of the first public beta of Mail Inspector 4.0. Besides a complete rewrite tons of new features made it into this release. Some of the core features are IMAP and SSL support as well as APOP and some cool spam filters.

Here is a briefly list of the new features:

- High performact engine allowing to handle mails for different accounts in parallel
- Powerfull new notification system
- Multiple mail clients
- Support for POP3 (inkl. APOP), SMTP, IMAP3 and SSL
- Extensive spam filtering
- Reply, Reply all and Forwarding of Mails
- Integrated automatic webupdate
- Tons of customization options
- and a lot more

You can download and enjoy it here.

Please note that this is a early beta version! This means that is feature complete but not bugfree. During beta extensive testing and bugfixing will be done as well as writing documentation. To report bugs use the integrated bug-report feature and/or post to the Mail Inspector 4 Beta Forum.

Happy new year!

Marc
